

QoS - Quality of Service

With many years of experience using Quality of Service on Linux, at Web2Mil we can help your organization optimize your Internet connection and the usage of your network.

Classify your traffic and don't allow software or P2P downloads to clog your network. Give all your users fair access to resources, or classify your users in priority groups, everything using QoS. As you'll soon find out, the possibilities are endless.

Contact us to know more about QoS.
